

CAREER PROFILE

- DevOps/Platform tech lead focused on AWS, Kubernetes, CI/CD, and automation that improves reliability, security, and delivery speed.
- Architectural background across distributed systems and cloud infrastructure; comfortable defining patterns, governance, and build-vs-buy decisions.
- Mentors teams and leads cross-functional collaboration with product, security, and customer architects to land designs and ship safely.
- Deep systems and database experience (MySQL/PostgreSQL/MSSQL/NoSQL) paired with strong troubleshooting and observability practices.

EXPERIENCES

AWS DevOps Engineer Jun 2025 - Present
Abra

- **AWS Platform & CI/CD** – Lead AWS infrastructure, CI/CD, and platform automation; streamline cost, reliability, and security baselines
- **AI Enablement** – Build and operate in-house LLM-powered tools and services; integrate safely into existing platforms with auth, guardrails, and observability
- **Team Leadership & Enablement** – Set DevOps standards, coach engineers and leads, and drive incident readiness/runbooks with product and customer-facing teams

Software Architect Oct 2023 - May 2025
Abra

- **Architecture Leadership** – Define patterns and standards across services and cloud infrastructure for new and existing products
- **Product Alignment** – Partner with engineering and product to evaluate build-vs-buy, sequence deliveries, and reduce technical risk

LANGUAGES

Hebrew
(Native)

- **Cross-Team Coordination** – Work with in-house and customer architects to align designs; guide and upskill team leads through reviews and pairing

- **Mission Systems** – Architect distributed/federated, high-assurance solutions for defense programs with stringent confidentiality requirements

CTO/Fullstack developer/Sr. System Administrator - Sep 2019 - Sep 2023
Giganet, Israel

- **Datacenter Administration**– Plan, build and maintain a highly-available, always on environment spanning multiple datacenters serving hundreds of companies

- **Training/Mentoring** - Introducing a training/mentoring program for all interested staff to eliminate dependency on external contractors

- **Fullstack Development** – Built a distributed, full stack (Backend/Frontend/Distributed Agents), VOIP management system serving thousands of customers

- **Operational Monitoring** – Set up and maintain monitoring systems (Prometheus/Telegraf/InfluxDB/Grafana) for internal systems spanning hundreds of VMs

- **CI/CD** - Built and maintained pipelines for multiple in-house products with ArgoCD, github actions and gitlab CI

- **Kubernetes** - Built and maintain Kubernetes clusters hosting internal services and monitoring systems

PROJECTS

Some projects I've worked on over the years

cours.es (<https://github.com/RoeerJ/coursedashboard>) - Dashboard used for serving an android development course - not running anymore

NGNSA (<https://github.com/RoeerJ/ngnsa>) - Anticheat/remote memory editor used for a game server I ran

NGNS (<https://github.com/RoeerJ/ngns>) - An emulated game server for a MMORPG, based on an older open source project, highly customized and improved
